|               | B180      | 90    | 15                         |                      |
|               | B100      | 60    | 7                          |                      |
| SOLAR         | B80       | 55    | 8                          |                      |
|               | S50       | 30    | 5                          |                      |
|               | S20       | 14    | 2                          |                      |
|               | S17       | 10    | 1                          |                      |

Table is a guide only. In dry conditions, Energizers have proven to work effectively for more than twice the distance. In high vegetation growth areas, distances may need to be reduced.
